- (iv) Destruction of wetlands for Urbanization & Agricultural expansion
- (v) Eutrophication: Algal blooms restrict oxygen & nutrients for Mangrove plants
- (vi) Development of ports: (Eg) Haldia, Kolkata

Natural reasons →

- (1) Cyclones, Tsunamis and other extreme events
- (2) Flooding in Rivers

Measures for Protection →

- (i) REDD+ program for conservation of Mangroves for (i.e. incentive local communities to protect)
- (ii) Prohibition of Mining & oil extraction near mangrove forests
- (iii) Adequate Solid waste disposal, & implementation of extended producer responsibility regime, et
- (iv) Agricultural reforms like fertilizer subsidy rationalization for preventing Eutrophication
- (v) Making Embankments, flood walls et to protect in case of cyclones

Mangroves are part of our Blue economy.

We need to protect Mangroves in order to achieve our SDG goal 14 (i.e. life below water) by 2030.

Q.16) The largest contributors to climate change, cities are also one of the most vulnerable to its adverse effects. Explain. Also analyze the role of cities in achieving carbon neutrality and building climate resilience. (15 marks, 250 words)

जलवायु परिवर्तन में सबसे बड़े योगदान देने वाले शहर भी इसके प्रतिकूल प्रभावों के प्रति सर्वाधिक सुभेद्य हैं। व्याख्या करें। कार्बन तटस्थता प्राप्त करने और जलवायु लचीलापन बनाने में शहरों की भूमिका का भी विश्लेषण करें।

(15 अंक, 250 शब्द)

According to report by IMD, Year 2021 has noted 203 events of heat waves (largest till now). Also urban flooding events have been increasing recently. (Eg) Hyderabad, Mumbai etc.

These show that cities are not only contributors to climate change but also most vulnerable.

Cities : CONTRIBUTOR to Climate Change (CC)

(i) Luxury Effect : Use of ACs, refrigerators, etc contribute to GHGs like CFCs, HFCs, etc.

(ii) Transportation → Release of Gases such as SO_2 , NO_x , etc is increasing. (GHG gases)

(iii) Industries are situated near cities, fulfilling the demand for them.

(Eg) Release of CO_2 (GHG).

(iv) Excessive requirement of Energy to power buildings, offices, industries, etc.

(In India 52% of Energy still produced from coal \Rightarrow CO₂ emission)

Cities: vulnerable to its impact \rightarrow

(i) Population: According to Census 2011, 37% of India's population live in Urban areas.

Moreover large density (\odot Delhi 10000/sq km)

(ii) Drainage are choked due to plastic pollution
(\Rightarrow Urban flooding)

(iii) Encroachment on river flood plains and on Agricultural lands
(\odot Excess water will flow in cities).

(iv) Floor made up of concrete (\Rightarrow Urban heat Island effect)

(v) Deaths due to heat strokes

According to Ministry of Health Affairs data

2444 deaths in South India in last 5 years due to heat strokes.

Role of cities in achieving Carbon neutrality & building Climate resilience.

- (i) Use of Green Buildings can decrease heat absorption & use Energy conservation building code by Bureau of Energy efficiency.
- (ii) Shift to Electric vehicles will reduce carbon emission. & leverage FAME-II scheme.
- (iii) Increase demand of energy from Renewables & (e) Energy conservation amendment act → compulsory minimum usage of RE.
- (iv) Use of Public transports can reduce CO₂ emission.
- (v) Building new techniques like Hydroponics, aeroponics, etc can reduce CH₄ emissions in Agriculture.

We need to change our living standards in according to environmental needs.

Q.17) Account for the shift in location of sugar industry. What has been the economic and ecological consequences of these shifts? (15 marks, 250 words)

चीनी उद्योग के अवस्थिति में परिवर्तन के कारणों का विवरण दें। इन परिवर्तनों के आर्थिक और पारिस्थितिक परिणाम क्या रहे हैं? (15 अंक, 250 शब्द)

Sugar industries were primarily concentrated in Northern belts of India. Now they are being shifted to Southern states too.

Reasons for these shifts are as follows

(i) Sugarcane of Southern region have more sucrose content (due to tropical weather)

(ii) Sugarcane can be grown all year round.

(In Northern India it is only a Kharif crop)

(iii) Cheap labour available due to migration to Southern states

- (ii) Increasing employment for manual labourers
- (iii) Increased Migration from Northern belt (UP, Bihar, Jharkhand) to Southern states.
- (iv) Increase exports of Sugar → More FOREX

⊕ However Sugar industries ^{have} ~~are~~ still not reached economies of scale due to :-

↳ In South India farmers have more income from other cash crops like Tobacco, Cotton, rubber & spices.

ECOLOGICAL CONSEQUENCES of these shifts →

- (i) Since Sugarcane is a water guzzling

Wof → depleted Ground water table in South India

- (ii) It require greater amount of fertilizers & pesticides.
→ soil acidity and salinity has increases.
- (iii) It has lead to deforestation of ~~fore~~ due to expansion of Agricultural farms

In Northern belt → Sugarcane is still grown on a large scale. It has led to groundwater depletion & soil salinity there too.

WAY FORWARD →

- (i) Promotion of Geo-Climatic agriculture
i.e. Sugarcane should be grown where rainfall is high.
- (ii) Shift to Natural farming to save soil health
- (iii) Crop diversification, Crop rotation as well as mulching needs to be promoted.

PLI scheme can be granted to Sugar industries for increasing exports, thus doubling farmer's income

(i) TFR is now 2.0.
(NFHS-5)
below replacement ratio.

(Population will itself stabilise in few years)

(ii) It will increase Parents control over women.

(iii) Scholars say → early 20s are more safer for pregnancies.
